L1 ANSWER 1 OF 1 WPINDEX COPYRIGHT 2006 THE THOMSON CORP on STN
AB DE 29712271 U1 UPAB: 19971030

The bow (361,371,392,461,471,492) is joined by a link (412,432) to the middle part (340,440) of the spectacles frame and is pivotable in a position in which it lies in a spectacles plane extending through a central vertical (B) and a central line (A) of the spectacles and in a vertical direction to the spectacles plane without covering to the central part (340,440).

The middle part is foldable around an axis vertical to the plane of the spectacles, so that the lenses (350,450) in the completely folded together state are located next to one another in the spectacles plane. The bow, through successive folding movements, is foldable around axes vertical to one another in the spectacles plane.

ADVANTAGE - The spectacles frame, in the completely folded -together state, is as flat and compact as possible. Dwg.1/11
